☐ **41. METHODS OF USING COMBINATIONS OF EGF-2 AND EGF-20 TO TREAT CENTRAL NERVOUS S DISORDERS**
ITO, Nobuyuki / THE UNIVERSITY OF KYOTO, PATENT COOPERATION TREATY APPLICATION
 Dec 2004

Compositions and methods for treating central nervous system (CNS) disorders in a mammal provided. Compositions comprise combinations of fibroblast growth factor-2 (FGF-2) and fibro growth factor-20 (FGF-20) in therapeutically effective...

Claims of corresponding document: **US5772640**

What is claimed is:

1. A hydrophilic polymeric medical article which has been impregnated, coated, or impregnated and coated with a treatment solution comprising (i) between about 1 and 10 percent of a hydrophilic polymer; (ii) between 1 and 5 percent of an antiinfective agent selected from the group consisting of chlorhexidine free base, a chlorhexidine salt, and a chlorhexidine derivative; and (iii) between 0.5 and 5 percent of triclosan.
2. The medical article of claim 1 which is fabricated from a hydrophilic polymer selected from the group consisting of natural rubber latex and biomedical polyurethane.
3. The medical article of claim 1 wherein the hydrophilic polymer in the treatment solution is a biomedical polyurethane.
4. The medical article of claim 2 wherein the hydrophilic polymer in the treatment solution is a biomedical polyurethane.
5. A hydrophilic polymeric medical article which has been impregnated, coated, or impregnated and coated with a treatment solution comprising (i) between about 1 and 10 percent of a hydrophobic polymer (ii) between 1 and 5 percent of an antiinfective agent selected from the group consisting of chlorhexidine free base, a chlorhexidine salt, and a chlorhexidine derivative; and (iii) between 0.5 and 5 percent of triclosan.
6. The medical article of claim 5, further comprising silver sulfadiazine.
7. The medical article of claim 6 wherein the hydrophobic polymer is a biomedical silicone polymer.
8. The medical article of claim 6 wherein the hydrophobic polymer is a silicone-polyurethane copolymer.
9. The medical article of claim 5 which is a catheter.
10. The catheter of claim 9 which is an intravenous catheter.
11. The catheter of claim 10 which is fabricated from a biomedical polyurethane.
12. The catheter of claim 11 wherein the hydrophobic polymer in the solution is a biomedical silicone-polyurethane copolymer.
13. The medical article of claim 5 which is fabricated from a hydrophilic polymer selected from the group consisting of natural rubber latex and biomedical polyurethane.
14. The medical article of claim 13 wherein the hydrophobic polymer in the treatment solution is a biomedical silicone polymer.
15. The medical article of claim 13 wherein the hydrophobic polymer in the treatment solution is a silicone-polyurethane copolymer.
16. The medical article of claim 5 wherein the hydrophobic polymer in the treatment solution is a biomedical silicone polymer.
17. The medical article of claim 5 wherein the hydrophobic polymer in the treatment solution is a silicone-polyurethane copolymer.
18. A hydrophobic polymeric medical article which has been impregnated, coated, or impregnated and

coated with a treatment solution comprising (i) between about 1 and 10 percent of a hydrophobic polymer (ii) between 1 and 5 percent of an antiinfective agent selected from the group consisting of chlorhexidine free base, a chlorhexidine salt, and a chlorhexidine derivative; and (iii) between 0.5 and 5 percent of triclosan.

19. The medical article of claim 18 which is fabricated from a hydrophobic polymer selected from the group consisting of polytetrafluoroethylene, Dacron, which is a polyethylene terephthalate polyvinylchloride, biomedical silicone polymer, and silicone polyurethane copolymer.

20. The medical article of claim 19 wherein the hydrophobic polymer in the treatment solution is a biomedical silicone polymer.

21. The medical article of claim 19 wherein the hydrophobic polymer in the treatment solution is a silicone-polyurethane copolymer.

22. The medical article of claim 18 wherein the hydrophobic polymer in the treatment solution is a biomedical silicone polymer.

23. The medical article of claim 18 wherein the hydrophobic polymer in the treatment solution is a silicone-polyurethane copolymer.

24. A method for rendering a silicone catheter antiinfective, comprising:

- (1) placing the silicone catheter in an impregnating solution comprising (a) a solvent which causes the catheter to swell; (b) between 1 and 5 percent of an antiinfective agent selected from the group consisting of chlorhexidine free base, a chlorhexidine salt, and a chlorhexidine derivative; (c) between 0.5 and 5 percent of triclosan; and (d) between 1 and 10 percent of a biomedical polymer;
- (2) soaking the catheter in the impregnating solution for a period of time sufficient to allow the catheter to swell;
- (3) removing the catheter from the impregnating solution; and
- (4) drying the catheter.

25. The method of claim 24, wherein the biomedical polymer is a biomedical silicone polymer.

26. The method of claim 24, further comprising the step of dipping the catheter, after drying according to step (4), into a second coating solution comprising a biomedical polymer.

27. The method according to claim 26, wherein the biomedical polymer in both the impregnating solution and the second coating solution is a biomedical silicone polymer.

28. A hydrophobic polymeric medical article which has been impregnated, coated, or impregnated and coated with a treatment solution comprising (i) between about 1 and 10 percent of a hydrophilic polymer; (ii) between 1 and 5 percent of an antiinfective agent selected from the group consisting of chlorhexidine free base, a chlorhexidine salt, and a chlorhexidine derivative; and (iii) between 0.5 and 5 percent of triclosan.

29. The medical article of claim 28 which is fabricated from a hydrophobic polymer selected from the group consisting of polytetrafluoroethylene, Dacron, which is a polyethylene terephthalate polyvinylchloride, biomedical silicone polymer, and silicone polyurethane copolymer.

30. The medical article of claim 28 wherein the hydrophilic polymer is a biomedical polyurethane.
